Taxonomy

Kingdom	Phylum	Class	Order	Family
Animalia	Arthropoda	Insecta	Lepidoptera	Pieridae

Taxon Name: *Euchloe eversi* Stamm, 1963

Taxonomic Notes:

Euchloe eversi was considered a subspecies of the Green-striped White (*E. belemia*). Based on studies in molecular biology, it has been separated from the nominate species (Back *et al.* 2008) , but recent studies put this conclusion again under discussion (Suarez *et al.* 2009).

Assessment Information

Red List Category & Criteria: Least Concern [ver 3.1](#)

Year Published: 2010

Date Assessed: January 29, 2009

Justification:

This species is listed as Least Concern, since it has not been declining by more than 25% in the last ten years and its population size is probably larger than 10,000 adult individuals.

Geographic Range

Range Description:

Restricted to the Canary Island of Tenerife. Its elevational range is above 2,000 m. This is a European endemic species.

Country Occurrence:

Native: Spain (Canary Is.)

Distribution Map

Euchloe eversi

Range

■ Extant (resident)

Compiled by:
Butterfly Conservation Europe
2009

The boundaries and names shown and the designations used on this map do not imply any official endorsement, acceptance or opinion by IUCN.

Population

A local species, restricted to (semi-) natural areas.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

The species occurs in the Canades des Teide at altitudes of 2,000 m and higher. The larval foodplant is *Descurainia bourgeana*. Detailed habitat descriptions are not available.

Systems: Terrestrial

Use and Trade

All butterflies are collected to some extent, but only for the extremely rare species it can be a problem and the trade in Europe is generally at a low level compared to other continents. There is no specific trade information for this species.

Threats

Although a rare endemic, this species is not believed to face major threats.

Conservation Actions

More research on the ecological requirements is needed. As far as is known now, no specific conservation actions are needed at a European level. But since it has a restricted global range, its distribution and trend should be monitored closely, for example by a Butterfly Monitoring Scheme.
