Taxonomy

Kingdom	Phylum	Class	Order	Family
Animalia	Arthropoda	Insecta	Hymenoptera	Megachilidae

Taxon Name: *Osmia palmae* Tkalčů, 2001

Assessment Information

Red List Category & Criteria: Data Deficient [ver 3.1](#)

Year Published: 2014

Date Assessed: October 13, 2013

Justification:

Listed as Data Deficient as there is little or no information available on the population size, trends, habitat, ecology and threats to the species. Research should be conducted in order to determine the status of this species.

Geographic Range

Range Description:

Osmia palmae is endemic to the Canary Islands, Spain (Tkalcu 2001).

Country Occurrence:

Native: Spain (Canary Is.)

Distribution Map

Osmia palmae

Range

■ Extant (resident)

Compiled by:
IUCN European Red List

The boundaries and names shown and the designations used on this map do not imply any official endorsement, acceptance or opinion by IUCN.

Population

The trend and population size of this species are not known.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

This species possibly occurs in Mediterranean-type shrublands, although the habitat has not been described. The ecology of *Osmia palmae* is currently unknown.

Systems: Terrestrial

Use and Trade

There is no current exploitation that could represent a threat to the species as a whole.

Threats

The threats to this species are not known.

Conservation Actions (see Appendix for additional information)

The species is not listed in any National Red Lists or Red Data Books. It is unknown whether it occurs within any protected areas. Further research should be conducted to determine the population size and trends, habitat and ecology, and threats to the species.
