Taxonomy

| Kingdom | Phylum | Class | Order | Family |
|----------|----------|------------|-----------------|----------------|
| Animalia | Mollusca | Gastropoda | Stylommatophora | Cochlicellidae |

Taxon Name: *Monilearia monilifera* (Webb & Berthelot, 1833)

Assessment Information

Red List Category & Criteria: Least Concern [ver 3.1](#)

Year Published: 2013

Date Assessed: March 24, 2011

Justification:

This species is relatively widespread and there is no known major threat. It is therefore considered to be Least Concern (LC).

Geographic Range

Range Description:

This species is widespread on Fuerteventura and Lanzarote.

Country Occurrence:

Native: Spain (Canary Is.)

Distribution Map

Monilearia monilifera

Range

■ Extant (resident)

Compiled by:
IUCN

The boundaries and names shown and the designations used on this map do not imply any official endorsement, acceptance or opinion by IUCN.

Population

There is no information available on the population size of this species.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

This species lives in the dry temperate shrub vegetation (Piso basal).

Systems: Terrestrial

Use and Trade

This species is not used.

Threats

This species is susceptible to ongoing agricultural and touristic activities as well as grazing by goats. However, there are no data on any major influence of these threats to the population.

Conservation Actions

Parts of the known range of this species are under protection schemes.
