Taxonomy

Kingdom	Phylum	Class	Order	Family
Animalia	Mollusca	Gastropoda	Stylommatophora	Cochlicellidae

Taxon Name: *Monilearia tubaeformis* Alonso & Groh, 2006

Assessment Information

Red List Category & Criteria: Near Threatened [ver 3.1](#)

Year Published: 2013

Date Assessed: March 24, 2011

Justification:

This species is endemic to a small area on Lanzarote. It is known from four locations, the area of occupancy is 16 km². There are no major threats affecting this species at the moment. It is therefore considered to be Near Threatened (NT). However, if a threat was to occur, this species could qualify for a higher threat category.

Geographic Range

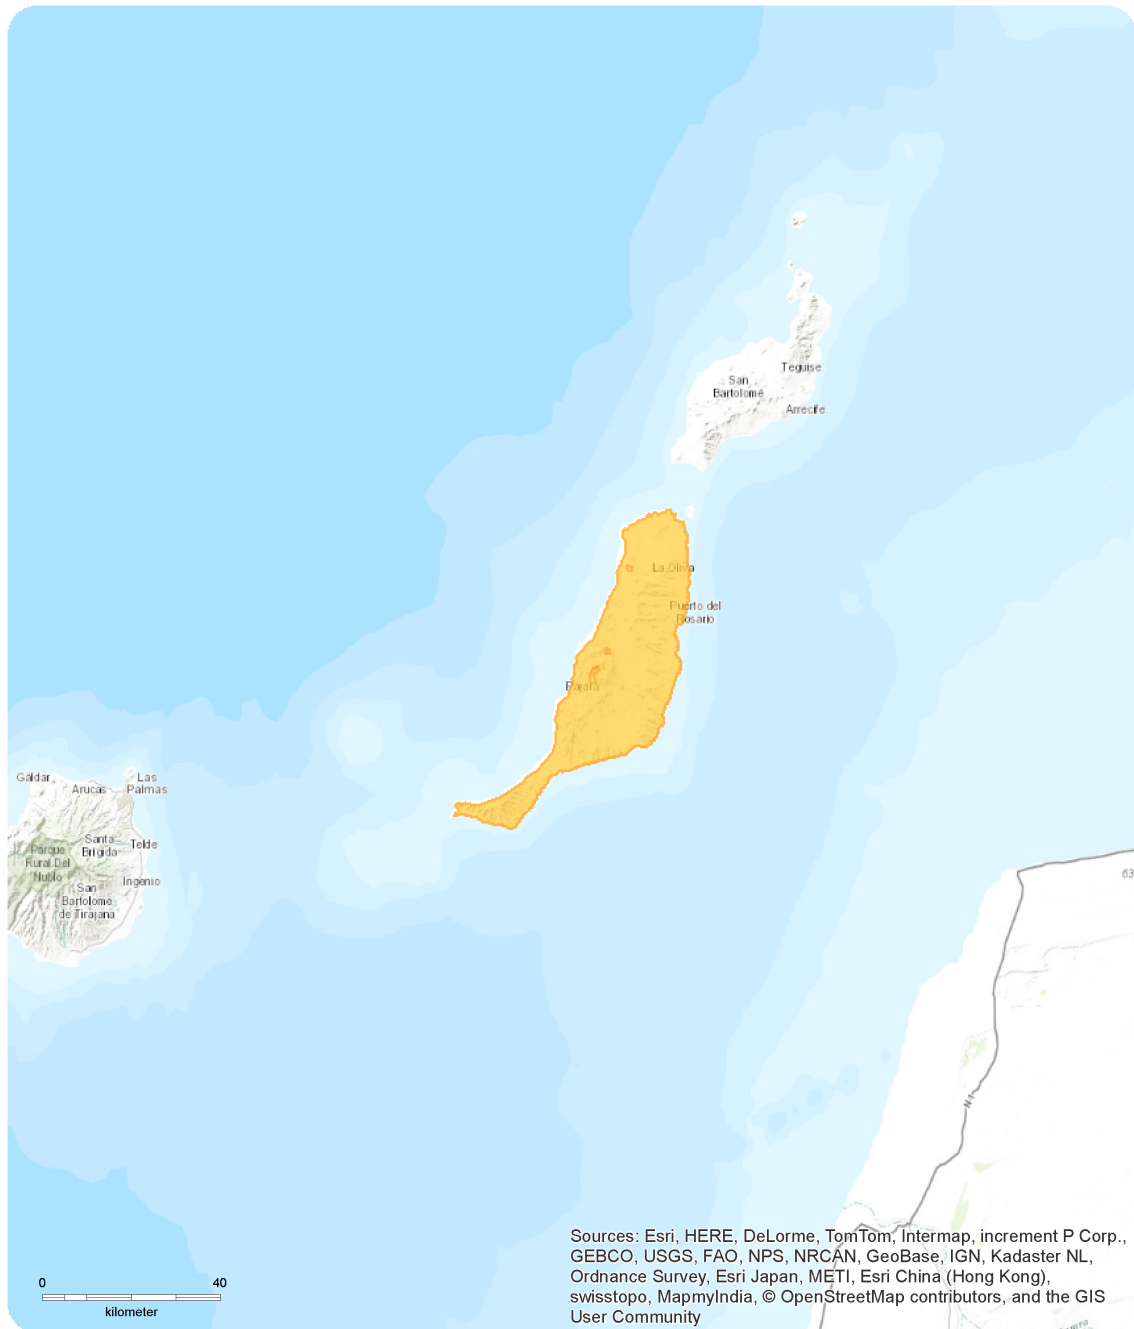

Range Description:

This species is endemic to the central and northwestern part of Fuerteventura.

Country Occurrence:

Native: Spain (Canary Is.)

Distribution Map

Monilearia tubaeformis

Range

■ Extant (resident)

Compiled by:
IUCN

The boundaries and names shown and the designations used on this map do not imply any official endorsement, acceptance or opinion by IUCN.

Population

There are no data on the population size or trend.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

This species lives in the dry temperate shrub vegetation (Piso basal). This is a ground dwelling species living under stones and in the soil.

Systems: Terrestrial

Use and Trade

This species is not used.

Threats

There are no threats to this species known, only small parts of the range can possibly be affected by agricultural activities.

Conservation Actions

Large parts of the subpopulations are under local conservation schemes.
