Taxonomy

Kingdom	Phylum	Class	Order	Family
Animalia	Mollusca	Gastropoda	Stylommatophora	Enidae

Taxon Name: *Napaeus obesatus* (Webb & Berthelot, 1833)

Assessment Information

Red List Category & Criteria: Least Concern [ver 3.1](#)

Year Published: 2013

Date Assessed: March 28, 2011

Justification:

This species is relatively widespread and there is no threat known to this species, but there is generally more research needed for this species. It is therefore considered to be Least Concern (LC).

Geographic Range

Range Description:

This species is endemic to the island of Gran Canaria. It is known from a relatively large area especially in the north, e.g. Galdar, El Monte near Barlovento, Las Palmas, and can probably still be considered a common species at medium altitude levels. There are no precise distribution data available.

Country Occurrence:

Native: Spain (Canary Is.)

Distribution Map

Napaeus obesatus

Range

■ Extant (resident)

Population

There is no information available for this species.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

This species lives in the dry temperate shrub vegetation (Piso infracanario).

Systems: Terrestrial

Use and Trade

There is no information available for this species.

Threats

There is no information available for this species.

Conservation Actions

There is no information available for this species.
