## Taxonomy

Kingdom	Phylum	Class	Order	Family
Animalia	Mollusca	Gastropoda	Stylommatophora	Vertiginidae

**Taxon Name:** *Truncatellina atomus* Shuttleworth, 1852

## Assessment Information

**Red List Category & Criteria:** Data Deficient [ver 3.1](#)

**Year Published:** 2013

**Date Assessed:** March 26, 2011

### Justification:

There is not enough information to assess the conservation status of this species. Further research is needed on the number, size and trend within the populations of this species. It is therefore listed as Data Deficient (DD).

### Previously Published Red List Assessments

1996 – Data Deficient (DD)

1994 – Insufficiently Known (K)

## Geographic Range

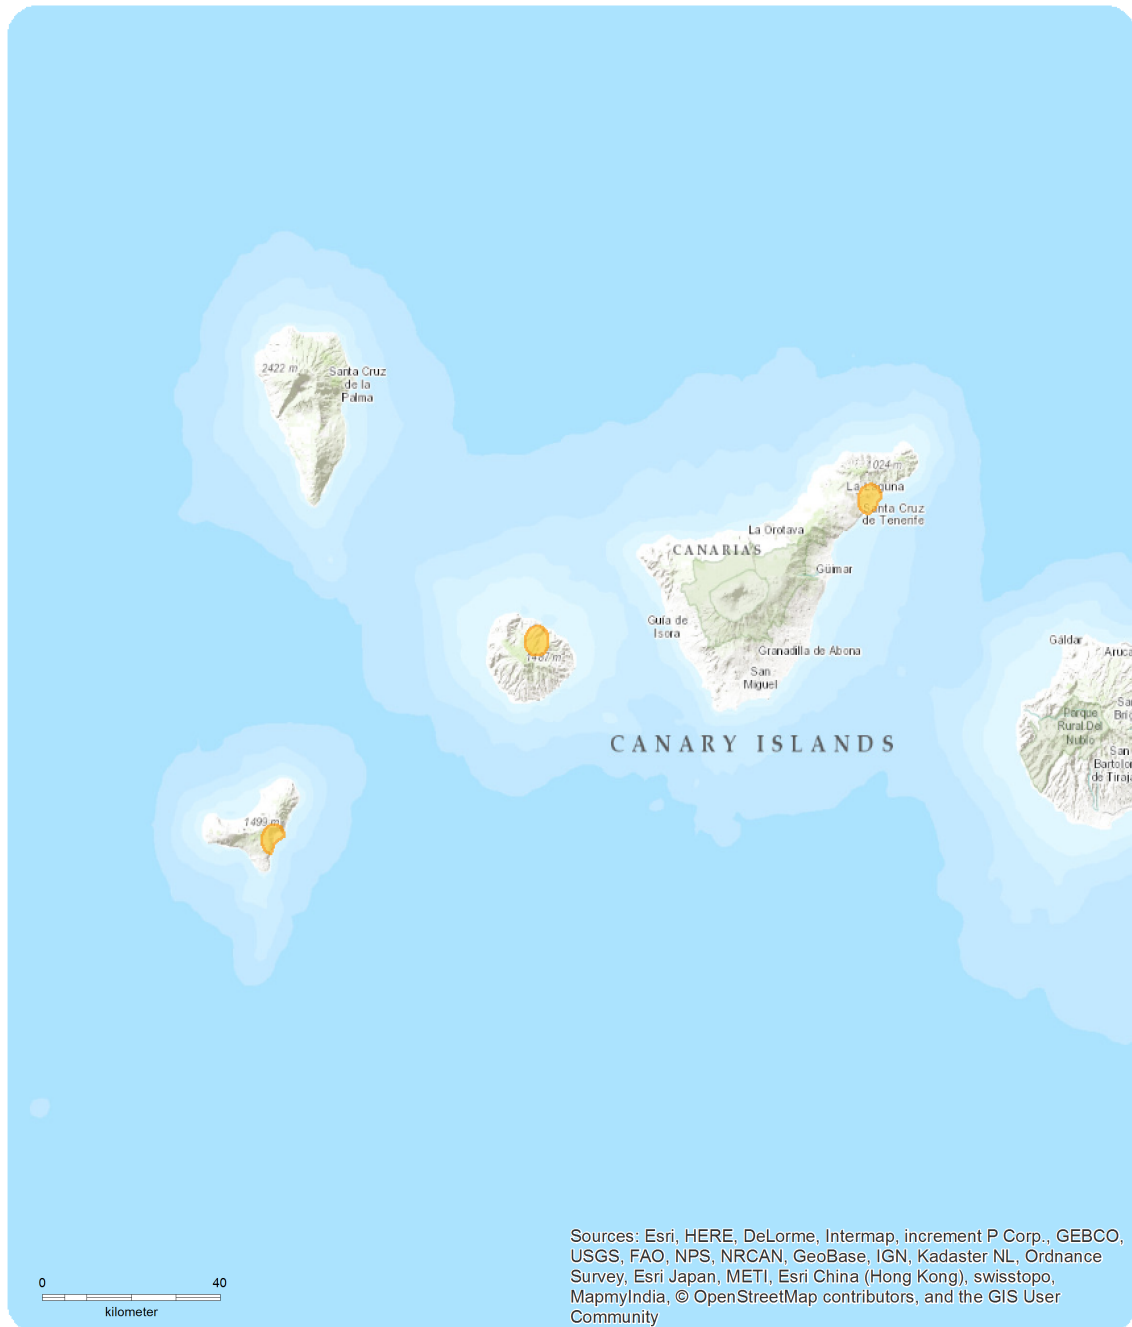

### Range Description:

This species is endemic to the Canary Islands, and is recorded from the Islands of Tenerife, La Gomera and El Hierro. From Tenerife, there are recent shells known collected by Blauner (type locality, not specified), and some fossils from Costa de el Draguillo. Shells have been found on La Gomera (fossil from Bco. de Machal, recent only from Hermigua in the north-east of the islands.). From El Hierro, it is only known from the Parador in the south of the island.

### Country Occurrence:

**Native:** Spain (Canary Is.)

# Distribution Map

## *Truncatellina atomus*

Range

■ Extant (resident)

Compiled by:  
IUCN

The boundaries and names shown and the designations used on this map do not imply any official endorsement, acceptance or opinion by IUCN.

## Population

There is no information available on the population size or trend of this species.

**Current Population Trend:** Unknown

## Habitat and Ecology (see Appendix for additional information)

This species lives in the soil of the dry temperate shrub vegetation (Piso basal).

**Systems:** Terrestrial

## Use and Trade

This species is not used.

## Threats

The threats to this species are not known.

## Conservation Actions

Monitoring of trend and size of populations on the three islands where the species occurs is strongly suggested.
