Taxon Name: *Xerotricha orbignii* (D'Orbigny, 1836)

Assessment Information

Red List Category & Criteria: Least Concern [ver 3.1](#)

Year Published: 2013

Date Assessed: March 25, 2011

Justification:

This species is relatively widespread and there is no known specific threat to this species. It is therefore considered to be Least Concern (LC).

Geographic Range

Range Description:

This species is endemic to the island of Tenerife, where it is widespread and abundant.

Country Occurrence:

Native: Spain (Canary Is.)

Population

The size and trend within the subpopulations are stable.

Current Population Trend: Stable

Habitat and Ecology (see Appendix for additional information)

This species lives in the dry temperate shrub vegetation (Piso basal), but also in salt marshes at sea level and in the pine forests at higher elevations (Pinar).

Systems: Terrestrial

Use and Trade

This species is not used.

Threats

Potential threats to this species are destruction of the habitat by quarrying, urbanisation, road construction or by other reasons. However the destruction of the entire habitat is not very likely.

Conservation Actions (see Appendix for additional information)

Only few subpopulations are under local conservation schemes.
