Assessment Information

Red List Category & Criteria: Least Concern [ver 3.1](#)

Year Published: 2017

Date Assessed: November 28, 2016

Justification:

The species is endemic to the Azores Islands (Portugal), where it is only known from Sao Miguel. However, the species is widespread throughout the island (De Frias Martin *et al.* 2013) and it can be considered Least Concern (LC), given its widespread distribution and absence of significant threats.

Geographic Range

Range Description:

This species is endemic to the Azores Islands (Portugal), where it is only known from Sao Miguel. It is widespread throughout this island (de Frias Martins *et al.* 2013).

Country Occurrence:

Native: Portugal (Azores)

Population

The species is present in many habitats and is common on the island.

Current Population Trend: Stable

Habitat and Ecology (see Appendix for additional information)

This species is present in a variety of habitats, including forest areas, and scrub across the island.

Systems: Terrestrial

Use and Trade

There is no known trade in this species.

Threats

The species is widespread and has no threats (A. de Frias Martins pers. comm. 2017).

Conservation Actions (see Appendix for additional information)

None required.
